DETAILED ACTION

In the Amendment dated July 25, 2005, the specification, Figs. 2, 10, 13 and Claims 1-5 and 8 are amended.

Examiner's Amendment

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

This application is in condition for allowance except for the presence of non-elected claims 6, 7 and 9-15 without traverse. Accordingly, claims 6, 7 and 9-15 have been canceled.

Allowable Subject Matter

Claims 1-5 and 8 are allowed.

The following is an examiner's statement of reason for allowance:

Claim 1 is allowable over the prior art of record because the prior art of record does not teach or render obvious a semiconductor memory device comprises an inversion layer region to be formed on the surface upon application of a voltage to the first electrode, the charge storage region being controlled by the second electrode such that information is stored by use of a characteristic that conductance between the diffusion layer and the inversion layer region

changes according to an amount of charge stored in the charge storage region, and in combination with all other features as recited in independent claim 1.

Claim 2-5 and 8 is allowable over the prior art of record because the prior art of record does not teach or render obvious a semiconductor memory device comprises an inversion layer region to be formed on the surface upon application of a voltage to the first electrode, and a third diffusion layer of the second conduction type which is formed such that it overlaps with one end of the inversion layer region, the potential of said first charge storage region and said second charge storage region being controlled by said second electrode such that information is stored by use of a characteristic that conductance between said first diffusion layer and said third diffusion layer changes according to an amount of charge stored in said first charge storage region and information is stored by use of a characteristic that conductance between said second diffusion layer and said third diffusion layer changes according to an amount of charge stored in said second charge storage region, and in combination with all other features as recited in independent claim 2.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance".
